WCAG Accessibility Scan Report

Shop Local Color NYC — shoplocalcolornyc.com

Scan Date: March 15, 2026 **Standard:** WCAG 2.1 Level AA **Tool:** pa11y (htmlcs engine)

Disclaimer

This report documents programmatically detectable accessibility issues found via automated scanning. Automated tools detect approximately 57% of WCAG 2.1 issues. Manual testing by an accessibility specialist is recommended for complete conformance assessment. This report does not constitute legal advice or guarantee ADA/EAA compliance.

Executive Summary

Shop Local Color NYC's Shopify-powered storefront returned 30 accessibility violations. The issues are spread across all four WCAG principles and reflect a consistent pattern: interactive elements throughout the site — navigation icons, search buttons, social media links, and product image links — have no text labels, making them entirely opaque to screen readers and keyboard users. A blind or low-vision customer would be unable to search the store, navigate to social media profiles, identify the store logo, or understand what product images link to.

Three product images in the featured collection section are also missing alt text entirely, and the email newsletter signup field has no accessible label. Two popup iframes from the MailChimp signup form have no title attributes. Additionally, footer attribution text has a 1.66:1 contrast ratio — well below the 4.5:1 minimum — rendering it unreadable to anyone with low contrast sensitivity.

The top three priorities for remediation are: (1) add descriptive `aria-label` attributes to all icon-only buttons and links (search, social icons, navigation icons), (2) add alt text to all product images and logo images used as links, and (3) label the email signup field with a proper form label.

Compliance Scorecard

WCAG Principle	Status	Issues
Perceivable (1.x)	Fail	11
Operable (2.x)	Fail	2
Understandable (3.x)	Pass	0
Robust (4.x)	Fail	17

Issues by Severity

Error Issues — 30 Total

PERCEIVABLE — Missing Alt Text and Image Links (7 issues)

#	Issue	WCAG Criterion	Element	Impact

1	The store logo image used as the homepage link has no alt text	1.1.1 Non-text Content / 1.3.1	Logo link in header	Critical — screen reader users cannot identify the site logo or navigate home
2	The hero slideshow image linking to "All Products" has no alt text describing the link destination	1.1.1	Hero slide 1 product image link	Serious — users cannot determine where this link leads
3	The hero slideshow image linking to the Gift Card product page has no alt text	1.1.1	Hero slide 2 gift card image link	Serious
4	A featured collection item image (first row) is missing an alt attribute entirely	1.1.1	Featured collection product photo	Serious — screen readers skip the image entirely
5	A featured collection item image (second item) is missing an alt attribute entirely	1.1.1	Featured collection product photo	Serious
6	A featured collection item image (third item, .heic file) is missing an alt attribute entirely	1.1.1	Featured collection product photo	Serious
7	Empty heading tag `<h2>` found on hero slide with no content	1.3.1 Info and Relationships	Empty slide title heading, slide 2	Moderate — creates confusing page structure for screen readers

How to fix (logo): The logo `<img>` inside the homepage link needs an `alt` attribute that names the store. Change it to `<img src="..." alt="Local Color NYC – Home">`. The alt text on a logo link should describe the link destination, not just the image.

How to fix (hero slide images): For each slideshow image that is wrapped in a link, add descriptive alt text to the `<img>` element: e.g., `alt="Shop all Local Color NYC products"` for the all-products link and `alt="Gift card – give the gift of Local Color NYC"` for the gift card slide.

How to fix (missing collection images): Add an `alt` attribute to each featured collection product image. The alt text should describe the product shown: e.g., `alt="Colorful tote bag by Local Color NYC"`. If the product name is available from your Shopify theme data, populate alt text dynamically from the product title.

How to fix (empty heading): Remove the empty `<h2 class="slide-title"></h2>` element from the second hero slide in the Shopify theme template. If the heading is conditionally populated, add a check so it is only rendered when it has content.

PERCEIVABLE — Color Contrast (3 issues)

#	Issue	WCAG Criterion	Element	Impact

8	Footer "Local Color NYC" link text has 1.66:1 contrast ratio (required: 4.5:1)	1.4.3 Contrast (Minimum)	Footer attribution link — site name	Moderate
9	Footer "Shopify Theme" link text has 1.66:1 contrast ratio	1.4.3	Footer attribution link — theme credit	Moderate
10	Footer "Powered by Shopify" link text has 1.66:1 contrast ratio	1.4.3	Footer attribution link — Shopify credit	Moderate

How to fix: In your Shopify theme's CSS, locate the footer attribution text color (likely set on `#close p a` or similar). Change the color to at least `#757575` on a white background. The current color is too light. These are small footer links, but they still must meet WCAG contrast requirements.

PERCEIVABLE — Form Label (1 issue)

#	Issue	WCAG Criterion	Element	Impact
11	Email newsletter signup input field has no accessible label	1.3.1 / 4.1.2	Email address field in newsletter signup section	Serious — screen readers will not announce the field's purpose

How to fix: Add a `<label>` element associated with the email input. If a visible label is not desired for design reasons, add `aria-label="Enter your email address"` directly to the `<input>` element. Placeholder text alone ("Enter Your Email Address") is not a substitute for a label.

OPERABLE — Iframes Without Titles (2 issues)

#	Issue	WCAG Criterion	Element	Impact
12	MailChimp popup signup form contains an unlabeled banner iframe	2.4.1 Bypass Blocks	Popup signup form, banner iframe	Moderate
13	MailChimp popup signup form contains an unlabeled modal iframe	2.4.1	Popup signup form, modal iframe	Moderate

How to fix: These iframes are injected by the MailChimp embedded form script. If the MailChimp form provider allows configuration, check for an option to add frame titles. Otherwise, after the MailChimp script loads, use JavaScript to retroactively add titles: `document.querySelector('#PopupSignupForm_0 iframe').title = 'Email signup form'`. If there are two iframes, address each one.

ROBUST — Unlabeled Interactive Elements (17 issues)

#	Issue	WCAG Criterion	Element	Impact

14	Mobile navigation search button (icon only, no text) has no accessible name	4.1.2 Name, Role, Value	Mobile nav search submit button	Critical — keyboard/screen reader users cannot activate search
15	Mobile navigation search text input has no accessible name	4.1.2 / 1.3.1	Mobile search input field	Critical — screen readers do not know this is a search field
16	Mobile navigation search text input missing label — second instance (desktop search, duplicate ID "q")	1.3.1	Desktop search input field	Serious
17	Desktop search submit button (icon only) has no accessible name	4.1.2	Desktop search form submit button	Critical
18	Mobile nav search input has duplicate `id="q"` — both mobile and desktop forms share the same ID	4.1.1 Parsing	Search input (both forms)	Serious — ID collision breaks label associations
19	Mobile navigation link to /search has no text content (icon only)	4.1.2	Mobile menu search icon link	Critical
20	Mobile navigation link to /account/login has no text content (icon only)	4.1.2	Mobile menu account/login icon link	Critical — users cannot identify this as a login link
21	Hero slideshow "Previous" navigation button has no text content	4.1.2	Slideshow previous-slide control	Serious — keyboard users cannot navigate the slideshow
22	Hero slideshow "Next" navigation button has no text content	4.1.2	Slideshow next-slide control	Serious
23	Hero slide 1 overlay "Shop Now" (or similar) link has no text content	4.1.2	Hero slide 1 call-to-action overlay link	Serious
24	Hero slide 2 (gift card) overlay call-to-action link has no text content	4.1.2	Hero slide 2 call-to-action overlay link	Serious
25	Facebook social icon link has no text content	4.1.2	Footer Facebook link	Serious — screen readers cannot identify this as a Facebook link
26	Pinterest social icon link has no text content	4.1.2	Footer Pinterest link	Serious

27	Instagram social icon link has no text content	4.1.2	Footer Instagram link	Serious
28	Email newsletter submit button (paper plane icon) has no accessible name	4.1.2	Newsletter form submit button	Critical — users cannot submit the newsletter form
29	Mobile search input missing label — first instance (unlabeled)	4.1.2	Mobile nav search input	Serious
30	Desktop search input missing label — first instance	1.3.1	Desktop nav search input	Serious

How to fix (icon-only buttons and links): Every interactive element that has no visible text must have an `aria-label` attribute. Apply the following fixes:

- Search submit buttons: `<button type="submit" aria-label="Search the store">`
- Search inputs: `<input type="text" aria-label="Search" ...>` (also fix duplicate `id="q"` — use `id="search-mobile"` and `id="search-desktop"`)
- Mobile nav search link: `<a href="/search" aria-label="Search">`
- Mobile nav login link: `<a href="/account/login" aria-label="Sign in to your account">`
- Slideshow previous: `<a class="flex-prev" aria-label="Previous slide">`
- Slideshow next: `<a class="flex-next" aria-label="Next slide">`
- Slideshow overlay links: add descriptive text or `aria-label` describing the destination (e.g., `aria-label="Shop all products"`)
- Facebook: `<a href="..." aria-label="Shop Local Color NYC on Facebook">`
- Pinterest: `<a href="..." aria-label="Shop Local Color NYC on Pinterest">`
- Instagram: `<a href="..." aria-label="Follow Local Color NYC on Instagram">`
- Newsletter submit: `<button type="submit" aria-label="Subscribe to our newsletter">`

Remediation Roadmap

Week 1 — Critical:

- Add `aria-label` to all icon-only buttons: search buttons (mobile and desktop), newsletter submit button, mobile nav login link, mobile nav search link
- Fix the duplicate `id="q"` — rename the two search inputs to distinct IDs
- Add alt text to the store logo link image

Week 2–3 — Serious:

- Add `aria-label` to slideshow Previous/Next controls
- Add alt text to all three featured collection images and both hero slideshow image-only links
- Add `aria-label` to hero slide overlay links
- Add `aria-label` or visible label to email newsletter input
- Add `aria-label` to all three social icon links (Facebook, Pinterest, Instagram)
- Remove the empty `<h2>` heading from hero slide 2

Month 2 — Moderate:

- Fix footer attribution text contrast (3 links)
- Add `title` attributes to the two MailChimp popup iframes

Technical Summary

- **Pages scanned:** 1
- **Total violations:** 30
- **Unique issue types:** 8
- **Most common issue:** 4.1.2 Name, Role, Value — unlabeled interactive elements (17 instances)
- **Principles affected:** Perceivable (11), Operable (2), Robust (17)
- **Root cause pattern:** Icon-only interactive elements throughout the Shopify theme have no accessible names, making the site largely unusable for screen reader and keyboard-only users
